### **BRIDGING AFRICA'S CONNECTIVITY DIVIDE**

**IoT for Network Optimization:** Utilizing IoT sensors to monitor network performance, identify bottlenecks, and optimize resource allocation can significantly improve network efficiency.

**Drones for Network Expansion:** Drones can be employed for rapid network deployment in remote areas, especially for disaster recovery or temporary events.

**Underwater Communication:** Emerging technologies like underwater drones and acoustic communication can enhance connectivity in coastal regions and for offshore operations.

## SALES & MARKETING

**MR DENNIS MAMBURE**

When you are now dealing with audiences, particularly those that are outside of the country, you want to make sure that you are very clear of your communication. You must do away with biases...

## LIFESTYLE & CULTURE

### **CORPORATE MORALITY AND WHAT NOT TO DO**

Corporate Morality involves making decisions that are ethically sound, even when those decisions might not be legally required. It also includes how a corporation addresses issues like environmental sustainability, social responsibility, and corporate governance.

Welcome to **Mugaviri Business Magazine**. We are committed to delivering authoritative business insights and fostering a community of industry leaders. Your readership is invaluable to us, and we look forward to engaging with you through our compelling content that spans the spectrum of the business world.

# AFRICA III

# CONNECTIVITY

# INTERNET VELD FIRE

Africa, home to over 1.4 billion people, is undergoing a digital transformation that could redefine its socio-economic landscape. Internet connectivity, once a luxury for the few, is now spreading across the continent, offering unprecedented opportunities for economic growth, education, healthcare, and social inclusion. Despite the challenges posed by infrastructure deficits, and affordability, the progress made in the last decade is nothing short of remarkable.

## Current State of Connectivity

As of 2024, Africa has seen significant growth in internet penetration. This growth is largely driven by the proliferation of mobile networks, which account for over 70% of internet connections on the continent. Countries like Kenya, Nigeria, and South Africa are leading the charge, with internet penetration rates of 85%, 73%, and 70%, respectively. However Zimbabwe is showing remarkable progress and promising to be in the top 3 by 2030.

Mobile broadband is the primary mode of access for most Africans, thanks to the widespread adoption of affordable smartphones and the expansion of 3G and 4G networks. There are now more than 495 million mobile subscribers in Sub-Saharan Africa, with over 300 million of them accessing the internet via mobile devices. The rollout of 5G networks,

although still in its infancy, is expected to further accelerate connectivity, especially in urban areas.

## Challenges to Connectivity

Despite the positive trends, significant challenges hinder the widespread adoption of internet services across Africa. One of the most pressing issues is the lack of infrastructure, particularly in rural and remote areas.

Affordability remains another major barrier. According to the Alliance for Affordable Internet (A4AI), the cost of 1GB of mobile data in Africa is still relatively high. This is a significant burden for low-income households. The digital divide between urban and rural areas is stark, with rural populations often paying higher prices for lower-quality services.

Regulatory challenges have since caused serious problems to internet expansion, but now is a cry of the past.

## Progress and Initiatives

Despite these challenges, numerous initiatives are underway to enhance internet connectivity across Africa. Governments, private companies, and international organizations are collaborating to bridge the digital divide. For instance, the African Union's Digital Transformation Strategy aims to ensure universal access to affordable broadband by 2030.

This ambitious plan includes investments in infrastructure, digital skills development, and regulatory reforms to create a conducive environment for digital innovation.

Private sector initiatives have also played a crucial role. Companies like Google, Facebook, and Microsoft have launched projects to expand internet access. Google's Project Loon, for instance, uses high-altitude balloons to provide internet connectivity in remote areas, while Facebook's Express Wi-Fi initiative partners with local entrepreneurs to offer affordable Wi-Fi services in underserved communities. Moreover, Microsoft's Airband Initiative aims to bring broadband access to 40 million people globally, with a significant focus on Africa.

A network diagram consisting of several gold-colored spherical nodes connected by thin, grey, braided lines. The nodes are arranged in a roughly triangular pattern, with one node at the top left, one at the top right, one in the middle left, one in the middle right, and one at the bottom right. The lines connect these nodes in a way that forms a complex, interconnected web.

# IT'S ALL CONNECTED

*Silvia Njambi*

# MAKING & BREAKING ORGANISATIONS WITH PERSONAL BRANDS

**T**echnology has revolutionized HR in several impactful ways, particularly in personal branding and career development. As a career coach, I have seen technology shape careers in such an impactful way.

Technology has empowered individuals to take control of their personal brands and career trajectories more effectively than ever before. By leveraging these tools, professionals can continuously grow, connect, and showcase their unique value in the evolving job market.

**What impact does personal branding have on career success, and how can professionals develop a solid personal brand to advance their careers?**

How are individuals leveraging personal branding to achieve greater career growth?

I have 15 years of work experience, 5 of which have been spent in the HR space and working with professionals on all matters of careers, and I now actively spend a lot of my time working with professionals who are looking to elevate their brand and scale their careers.

Personal branding is critical in building a successful career. It helps individuals distinguish themselves in a competitive job market. A solid personal brand communicates your unique value proposition, showcasing your skills, experiences, and personality.

One channel for personal branding is building a solid online presence through LinkedIn and other social media platforms. This can make professionals visible to recruiters and employers worldwide. As I have always advised professionals, they must expand their net to the different job markets globally and not lock themselves into Africa.

By strategically building and leveraging your personal brand, you can create a powerful global presence that attracts international job opportunities and positions you as a desirable candidate for roles across the world.

If you have not started building your own personal brand, you are late.

**Can you share a pivotal moment in your career that has shaped your leadership and people management approach?**

This would have to be during my time at the HR firm, where I gained invaluable insights into HR and people management; I remember the challenge of establishing a training department from scratch. My Managing Director at the time handed me a skeletal framework and said, "Take it and develop it however you see fit." I am deeply grateful for his trust in me with such a significant responsibility. That opportunity has profoundly shaped much of what I do today. Within two months, I assembled a dynamic team, and together, we embarked on an incredible journey.

Leading this team taught me so much about people management, and I deepened my passion for emotional intelligence, personality, and temperaments. These three elements were crucial in helping me understand and manage my team more effectively.

In light of my experiences, here's my perspective on the evolving landscape of leadership and people management.

1. There is more emphasis on emotional Intelligence: Modern leadership places a greater focus on emotional intelligence (EI). Leaders are expected to understand and manage their own emotions while also being attuned to the emotions of their team members. This shift recognizes that empathy, self-awareness, and interpersonal skills are crucial for building strong, motivated teams.

2. We have moved to Inclusive Leadership: Diversity and inclusion have become central to effective leadership. Inclusive leaders actively seek out and value diverse perspectives, creating an environment where all team members feel empowered to contribute. This approach not only helps with innovation but also enhances employee engagement and retention.

3. There is a call for Adaptive Leadership: The pace of change in today's business environment requires leaders to be highly adaptable. Adaptive leadership involves being open to new ideas, willing to pivot strategies, and continuously learning. This flexibility helps organizations navigate uncertainties and seize opportunities in a rapidly evolving market.

4. Mental health is at the center of organizations now. The well-being of employees is now a critical consideration for leaders. This includes mental, physical, and emotional health. Leaders are increasingly adopting policies and practices that promote work-life balance, support mental health, and create a culture of well-being.

5. We must adopt technology Integration: The rise of remote and hybrid work has accelerated technology integration in people management. Leaders are leveraging digital tools to enhance communication, collaboration, and productivity. Effective use of technology also enables data-driven decision-making, helping leaders better understand and meet the needs of their teams.

**in your journey of assisting professionals in their personal branding and journey to better carrier opportunities and development, what is the most common problem(challenge) you have faced working with them and how do you navigate around it?**

One of the most common challenges I encounter while assisting professionals with their personal branding is overcoming self-doubt. Otherwise known as imposter syndrome. Many individuals struggle with recognizing their unique value and presenting it confidently, which can hinder their ability to build a compelling personal brand. To navigate this challenge, I focus on a few key strategies:

1. **Self-Reflection and Discovery:** I encourage clients to engage in self-reflection to uncover their strengths, achievements, and core values. This involves exercises like personal SWOT analyses (Strengths, Weaknesses, Opportunities, Threats) and storytelling to help them articulate their unique value propositions.

2. **Goal Setting and Alignment:** I work with clients to set clear, actionable goals that align with their personal and professional aspirations. This helps them build a brand narrative that is authentic and aligned with their career objectives.

3. **Ongoing Support:** Personal branding is an evolving process. I provide ongoing support and coaching to help clients adapt their brand as they grow and as their career goals evolve.

**PERSONAL**

**BRANDING**

# INTERNET Vulnerabilities and CYBER WARS: A Modern Battleground

Internet vulnerabilities are being exploited by malicious actors, leading to the emergence of cyber wars that threaten national security, economic stability, and personal privacy.

## Understanding Internet Vulnerabilities

Internet vulnerabilities refer to weaknesses in the design, implementation, and configuration of online systems that can be exploited by cybercriminals. These weaknesses can exist at various levels, including hardware, software, and even user behaviour.

### Common vulnerabilities include:

- **Software Bugs and Flaws:** Unpatched software and outdated systems are prime targets for cyber attackers. These bugs can allow unauthorized access or the execution of malicious code.
- **Phishing Attacks:** Cybercriminals often exploit human behaviour through phishing, tricking individuals into revealing sensitive information such as passwords and credit card numbers.
- **Weak Passwords:** Despite advancements in security technology, weak passwords remain a significant vulnerability, providing an easy entry point for hackers.
- **Insider Threats:** Employees or contractors with access to sensitive data can pose a serious risk if they misuse their privileges or fall victim to social engineering attacks.

## The Rise of Cyber Wars

As internet vulnerabilities persist, the landscape of conflict has evolved, giving rise to cyber wars. Unlike traditional warfare, which relies on physical force, cyber wars are fought in the digital realm, where information is the primary weapon. Nation-states, terrorist organizations, and independent hackers engage in these conflicts, targeting critical infrastructure, stealing sensitive data, and disrupting services.

- **Nation-State Cyber Attacks:** Governments around the world are increasingly investing in cyber capabilities. These attacks often focus on espionage, intellectual property theft, and the disruption of rival states' critical infrastructure.

- **Cyber Terrorism:** Terrorist organizations have also embraced the digital battleground, using cyber attacks to spread propaganda, recruit members, and disrupt the activities of their enemies.

- **Hactivism:** Ideologically motivated hackers, known as hactivists, use cyber attacks to promote political agendas, often targeting corporations, governments, and institutions they perceive as unjust.

## The Consequences of Cyber Wars

The impact of cyber wars extends far beyond the digital domain. The consequences of these conflicts can be devastating, both economically and socially.

- **Economic Disruption:** Cyber-attacks can cripple businesses, leading to financial losses, job cuts, and a loss of consumer trust. The global economy can also be affected, as trade and commerce increasingly rely on secure online systems.

- **National Security Threats:** Cyber wars pose a significant threat to national security. Attacks on critical infrastructure, such as power grids, water supply systems, and communication networks, can cause widespread chaos and disrupt daily life.

- **Erosion of Privacy:** As cyber conflicts intensify, individuals' privacy is often compromised. Governments and corporations may increase surveillance to protect against cyber threats, raising concerns about civil liberties.

## Mitigating the Threats

Addressing internet vulnerabilities and mitigating the risks of cyber wars requires a multi-faceted approach involving governments, businesses, and individuals.

- **Strengthening Cyber Defences:** Governments and organizations must invest in advanced cybersecurity measures, including encryption, multi-factor authentication, and regular software updates.

- **International Cooperation:** Cyber wars are a global issue that requires international collaboration. Nations must work together to establish norms and agreements that reduce the likelihood of cyber conflicts.

- **Raising Awareness:** Education and awareness programs can help individuals recognize and avoid potential cyber threats, reducing the effectiveness of attacks like phishing and social engineering.

# DR JAMES MAKAMBA

## CONNECTING AFRICA

**E**arly life all took place in Madziva, a communal area about 40 kilometers outside Bindura. Bindura is the capital of Mashonaland Central Province and is known for its mostly good soils for agriculture and minerals. That's where the early life, finds me from what used to be sub-a, I think it's now grade one to standard three, which must be grade three or four at a school called Mupfurudzi primary school in Madziva under chief Mutumba.

**What inspired me to venture into broadcasting and various other sectors?**

I took a job at Campion House, which is for those who are Catholic who know is the headquarters or the administrative house of Jesuit fathers, a sect in the Catholic Church.

I took a job there and they trained me to be a special assistant to the fathers. Special assistant sounds exotic, but you answer calls, you receive visitors, you make sure that the place is kept in order. Next to that was the Ministry of Education branch of audio-visual services.

Now, audio-visual services was responsible for recording radio lessons. I don't know whether they still do that now, but during our time you used to receive audio-recorded lessons, plays, etc. I used to accompany a friend there, we used to go there for recordings.

The director of that center was a Mr. Sifas Rangwani, whom I got to know quite well. And one of the actors in an English play did turn up on a certain day. And Mr. Rangwani said, yeah, but James, you have an idea what we do.

Why don't we give you a voice test and see if you can stand in for this guy, the rest is history. That's how I got into radio. It wasn't planned at all.

**The significant challenges I faced in my career? And were they worth the effort to overcome them?**

Challenges are always there. It doesn't matter. I mean, spending the day in bed is a challenge, by 11 in the morning, your ribs are aching, and so on, but without challenge, there is no growth.

So you always have people who are taunting you. In the radio, some people thought my voice was too heavy. Some thought I was behaving more like a Western broadcaster.

But the sponsors loved me, I was so busy. During my time, I grew up to be the busiest commercial radio broadcaster.

When you are presenting seven shows a week, you may be scripting them, scripting you may be writing them, you may be producing them. But when you are presenting seven,

regardless of whether you are the producer or the writer, seven, you are considered busy. At the height of my career, I presented 27 shows a week.

When you turned on the radio, it was, on top with Amato, Lions Made East of the Week, Go, Go Goliath. It was JCJ Makamba, JCJ Makamba everywhere. So the challenges are there.

They will always be there, but what is important is when you tumble, you find your balance and you keep going. So you make an effort. You keep making an effort to overcome the challenges. I don't know if I have been successful. All I know is I work, I apply myself, I plan what I do.

It's extremely important to know what you want to do and have a roadmap of how you intend getting there. The one thing that's extremely important is to be educated on the subject of your venture. If you have to read, if you have to take lessons, if you have to have a tutor, that's extremely important for you to be able to get to your destination, whatever you deem to be your destination, in good time and without wasting or losing a lot of time.

Get to know what you want to do and execute accordingly, because for everything, there's a formula.

**My vision for a more connected and economically integrated Zimbabwe?**

Zimbabwe, we have all the main ingredients to write a success story. We have an educated population. We have a stable government. We have good country leadership. We have a leadership that has had exposure, lived in exile, and see how other countries are managed. And so they have avoided certain mistakes, which have seen some economies collapse.

*Dr James Makamba*

And in our case, 20 years of sanctions. To survive that, it doesn't mean that we are lucky. It means, the leadership have had an exposure, the leadership have had a strategy, have had a certain dedication, the leadership is educated in order to overcome these pitfalls.

And you can see now the world's attitude is changing towards Zimbabwe. In Africa, in the SADC region, the PTA region, most of the countries are calling for the removal of sanctions. This is because of the dedication that the Zimbabwean political leadership have applied and have exhibited.

So economically, we are well placed. Africa is doing away with borders. The regions are becoming more and more integrated.

This August, the SADC summit is going to be held in Zimbabwe, where our esteemed leader, His Excellency E.D.

Mnangagwa will be handed over the baton to be chairman of SADC for the coming a period. This has numerous advantages. The privilege to showcase to the world our resources, our natural resources, our human resources, the potential, the infrastructure that we have built, that we are revamping, that we are building. So this chairmanship is going to do great stuff, for this country.

I personally wish His Excellency E.D. Mnangagwa well during his tenure of SADC. He's extremely dedicated in wanting to see the best for everybody, be they rural, be they urban, be they cross-border. like I said, he's also benefited from living, spending time outside this country, during the struggle.

It all expands, the way you view the world and the way you relate, you know, to other people.

Technology is now, is the name of the game. You can't do anything. Everything now relates to technology, connectivity, the internet, study, and trading. Everything comes back, to technology.

The borders are being done away with. Africa has agreed to become one trading bloc. Just imagine what this is going to do for Africa.

Over 1.2, billion people in Africa, we implement common passports, regional bloc passports that are acceptable to go anywhere in Africa.

The next time you think of an idea you want to catch a plane and you are on your way no need to worry about visas. This is what trade is all about. This is what integration is all about. The combination of travel, technology, the narrowing in of languages it's going to put Africa right there.

## Advice to young African entrepreneurs looking forward to make an impact on the African continent?

Get education. Everything goes back to education. What do you know? What do you want? How do you get it? How do you apply yourself? How do you relate to other people? The rules and regulations of your own country, the rules and regulations of regional trade, the rules and regulations of inter-country trade, the rules and regulations of doing business in the Far East, in Europe, in America, in the different African economies.

And it's never too late because now you don't have to sit in a classroom. You can sit at home. You can join a group.

You can take time off at work, go online, enroll for a course, and do it online. So, for young men and women who want to be out there, I would say get education. You look at all these people who are successful, you read the Forbes list of 400 people, the 40 richest men in the world, the 10 richest men in Africa, the 100 richest men in the UK.

Education is no longer a luxury. It's a necessity to engage, to foster, to execute. So, I would say to young people, get education and you will never look back.

I'm passionate about education, as I said, for the reasons that I've mentioned. I'm passionate about business because business is everything.

Trade is everything. I'm passionate about communications from my radio and TV experience. Communication is extremely important, the way you communicate, the way you are perceived, the way you relay a message, the way you make a presentation.

Philanthropy, unfortunately, because most of our history is written by other people. What is philanthropy?

It's helping the less fortunate. Most of us went to school through the help we received from our aunts, our uncles, our brothers, even distant relatives.

So, philanthropy is something that has existed in the African community from Cape to Cairo. It's just that it's portrayed differently in the Western world, but Africans are philanthropists, regardless of the education background. Remember, our forefathers used to have heads and heads of cattle, of sheep and goats. They used to mine all these minerals that we are raving about now. So, philanthropy, I think, is very, very much an African thing. A neighbour never goes starving. Philanthropy, is something that is part of us. It's part of our culture.

### The development of Zimbabwe?

I recently became a senator. Prior to this, I was an MP some 15, 20 years ago. I'm in the senate, debating, helping to shape up the laws of this country. I participate in education seminars.

Due to my experience of living abroad, overseas, and in Africa, I help young people look at certain cultures in order to advance themselves. If I have no cash in the bank, it's because I invest everything that I earn. Because Africa needs investment.

Every country needs investment. The big economies are what they are because of investment. So, I plan to continue playing my role in development, in the politics of the country, and interacting with the region, and a bigger, better exposure to Africa for my own benefit, and the benefit of our nation, Zimbabwe, and Mother Africa at large.

## JOHN TSERIWA

Regulatory frameworks are the backbone of cross-border connectivity. They establish the rules, standards, and guidelines that govern the telecommunications industry, ensuring a level playing field and promoting competition.

# BRIDGING AFRICA'S CONNECTIVITY

## DIVIDE

### LEVERAGING INFRASTRUCTURE

### SHARING AND THE FOURTH IN- DUSTRIAL REVOLUTION (4IR)

Infrastructure sharing initiatives can significantly enhance connectivity across African countries by:

#### Reducing Costs

**Shared investments:** By sharing the costs of building and maintaining infrastructure, countries can reduce individual financial burdens.

**Economies of scale:** Shared infrastructure often leads to lower operational costs due to increased utilization.

#### Expanding Coverage

**Faster deployment:** Sharing resources accelerates the rollout of networks, reaching more people in a shorter time.

**Complementary networks:** Combining different operators' infrastructure can create a more comprehensive network coverage.

#### Improving Efficiency

**Optimized resource utilization:** Efficient use of existing infrastructure prevents duplication and maximizes capacity.

**Accelerated service delivery:** Shared infrastructure can streamline processes and speed up service provisioning.

#### Fostering Collaboration

**Knowledge sharing:** Collaboration between operators can lead to the exchange of best practices and technological advancements.

**Regional integration:** Shared infrastructure can facilitate cross-border

connectivity and regional economic integration.

#### Addressing the Digital Divide

**Increased affordability:** Reduced costs due to sharing can lead to more affordable internet services.

**Broader access:** Expanding coverage can connect underserved communities and reduce the digital divide.

What role do regulatory frameworks play in promoting cross-border connectivity?

Regulatory frameworks are the backbone of cross-border connectivity. They establish the rules, standards, and guidelines that govern the telecommunications industry, ensuring a level playing field and promoting competition.

Here's a breakdown of their key roles:  
**Facilitating Cross-Border Infrastructure Sharing**

a) **Standardization:** Enforcing common technical standards for infrastructure components (e.g., towers, fiber optic cables) simplifies interoperability.

b) **Licensing and Permitting:** Streamlined processes for obtaining licenses and permits accelerate cross-border infrastructure deployment.

c) **Access Rights:** Granting fair access to infrastructure and rights-of-way promotes efficient resource

utilization.

#### Promoting Competition and Investment:

a) **Market Entry:** Clear and non-discriminatory market entry rules encourage new players and investments.

b) **Price Regulation:** Preventing anti-competitive practices and ensuring fair pricing stimulates competition.

c) **Spectrum Management:** Efficient spectrum allocation and management maximizes its use for connectivity services.

#### Protecting Consumers and Data

a) **Consumer Rights:** Establishing consumer protection measures builds trust and confidence in cross-border services.

b) **Data Privacy:** Implementing robust data protection regulations safeguards personal information.

c) **Cybersecurity:** Mandating cybersecurity standards ensures the security of networks and data.

#### Fostering Regional Integration

a) **Harmonization:** Aligning regulations across countries reduces barriers to cross-border services.

b) **Collaboration:** Encouraging regional cooperation in regulatory matters promotes joint initiatives.

c) **Dispute Resolution:** Providing effective mechanisms for resolving cross-border disputes ensures a stable regulatory environment.

By creating a conducive regulatory environment, governments can foster innovation, stimulate economic growth, and bridge the digital divide through enhanced cross-border connectivity.

#### How can private sector investments contribute to closing the connectivity gap in Africa?

Private sector investment is crucial in closing the connectivity gap in Africa. Here's how:

**Infrastructure Development**

**Network Expansion:** Private companies can invest in building and

and expanding telecommunication infrastructure, such as fiber optic cables, towers, and base stations.

**Last-Mile Connectivity:** Focusing on connecting rural and underserved areas, a key challenge in bridging the digital divide.

**Satellite Technology:** Investing in satellite technology can provide connectivity to remote regions with limited terrestrial infrastructure.

## Technology Adoption

**Innovative Solutions:** Private companies can develop and implement innovative technologies, like Wi-Fi hotspots, drones, and balloons, to provide internet access.

**Affordability:** Investing in cost-effective technologies and business models can make internet services more accessible to a wider populations

## Digital Services and Applications

**Content Creation:** Developing locally relevant content can drive internet usage and create demand for connectivity.

**Digital Platforms:** Building platforms for e-commerce, education, healthcare, and other sectors can stimulate internet adoption.

**Financial Inclusion:** Investing in mobile payment systems and financial technology can promote digital financial services.

**Job Creation and Skills Development Employment Opportunities:** Investments in the ICT sector create jobs directly and indirectly, contributing to economic growth.

**Digital Skills Training:** Supporting programs to develop digital skills can empower individuals and enhance the digital workforce.

## Public-Private Partnerships

**Collaboration:** Partnering with governments can leverage public resources and expertise to maximize impact.

**Risk Sharing:** Sharing risks and rewards can encourage private sector participation in high-risk but high-reward projects.

By combining financial resources,

technological expertise, and market knowledge, the private sector can play a pivotal role in accelerating Africa's digital transformation and bridging the connectivity gap.

While specific data on infrastructure sharing projects with quantifiable impacts on connectivity might be limited, there are notable examples of collaborative efforts that have positively influenced the telecom landscape in Africa:

### Regional Initiatives

**East Africa Submarine Cable System (EASSy):** This submarine cable system, connecting multiple East African countries, is a prime example of infrastructure sharing. By pooling resources, countries in the region have significantly improved internet connectivity and reduced costs.

**West African Cable System (WACS):** Like EASSy, WACS has enhanced connectivity among West African nations through shared infrastructure.

**National and Regional Tower Sharing South Africa:** Several tower companies have emerged, offering tower sharing services to multiple mobile operators. This has reduced capital expenditure for operators, accelerated network deployment, and improved network coverage.

**Nigeria:** While still in its early stages, there is growing interest in tower sharing, with some operators exploring opportunities to share infrastructure and reduce costs.

The Fourth Industrial Revolution (4IR) presents a unique opportunity for African businesses to enhance connectivity and communication. Here's how:

### Infrastructure Enhancement

**IoT for Network Optimization:** Utilizing IoT sensors to monitor network performance, identify bottlenecks, and optimize resource allocation can significantly improve network efficiency.

**Drones for Network Expansion:** Drones can be employed for rapid network deployment in remote

areas, especially for disaster recovery or temporary events.

**Underwater Communication:** Emerging technologies like underwater drones and acoustic communication can enhance connectivity in coastal regions and for offshore operations.

## Digital Communication Platforms

**AI-Powered Communication:** Developing AI-driven chatbots and virtual assistants can enhance customer service and support, providing efficient and personalized interactions.

**Video Conferencing and Collaboration:** Leveraging cloud-based platforms for high-quality video conferencing and collaboration tools can improve remote work and teamwork.

**Augmented Reality (AR) and Virtual Reality (VR):** These technologies can enhance communication and training by providing immersive experiences.

## Data Analytics and Insights

**Predictive Analytics:** Analyzing data to predict network congestion or failures can enable proactive maintenance and improve service quality.

**Customer Behaviour Analysis:** Understanding customer behavior through data analytics can tailor communication strategies and improve customer satisfaction.

**Cybersecurity:** Using AI and machine learning for threat detection and prevention can protect sensitive data and ensure secure communication.

## Digital Financial Services

**Mobile Payments:** Expanding mobile payment services through platforms like mobile money can enhance financial inclusion and facilitate digital transactions.

**Blockchain Technology:** Implementing blockchain for secure and transparent financial transactions can boost trust and efficiency.

The Fourth Industrial Revolution (4IR) is poised to revolutionize several sectors in Africa, with connectivity as a critical enabler. Here are some key areas:

### Agriculture

- **Precision Agriculture:** Using IoT sensors, drones, and data analytics to optimize farming practices, increase yields, and reduce waste.
- **Supply Chain Management:** Improving efficiency and transparency in agricultural supply chains through blockchain technology.
- **Market Access:** Connecting farmers to markets through digital platforms enables better price discovery and reduces post-harvest losses.

### Healthcare

- **Telemedicine:** Providing remote healthcare services through video conferencing and other digital tools, especially in rural areas.
- **Health Information Systems:** Improving data management and analysis for better disease prevention, treatment, and resource allocation.
- **Medical Research:** Accelerating medical research through data-driven insights and AI-powered drug discovery.

### Finance

- **Financial Inclusion:** Expanding access to financial services through mobile banking and digital payments.
- **Insurtech:** Leveraging technology to develop innovative insurance products and improve claims processing.
- **Fintech:** Creating new financial services and products through technology, such as peer-to-peer lending and crowdfunding.

### Education

- **Online Learning:** Providing access to quality education through online platforms and digital content.
- **E-learning Platforms:** Developing interactive and engaging learning experiences.
- **Teacher Training:** Using technology to enhance teacher training and development.

### Energy

- **Smart Grids:** Improving energy efficiency and reliability through digital technologies.

### Digital Skills Development

**Training and Education:** Investing in digital skills development programs can create a skilled workforce to support the adoption and implementation of new technologies.

**Partnerships:** Collaborating with educational institutions and technology companies can foster innovation and entrepreneurship.

By embracing these 4IR technologies, African businesses can overcome connectivity challenges, improve communication efficiency, and create new opportunities for growth and development.

**Challenges in Adopting 4IR Technologies for Connectivity in Africa**  
African governments face numerous challenges in integrating 4IR technologies for improved connectivity:

### Infrastructure Deficiencies

**Limited digital infrastructure:** A lack of robust fiber optic networks, data centers, and telecommunication towers hinders technology adoption.

**Power supply issues:** Frequent power outages and unreliable electricity disrupt digital services.

### Financial Constraints

**Insufficient budgetary allocations:** Limited resources for research, development, and implementation of 4IR technologies.

**High costs of technology:** The acquisition and maintenance of advanced technologies can be expensive.

### Human Capital Challenges

**Skill shortage:** A lack of qualified personnel in areas like data science, cybersecurity, and AI hampers technology adoption.

**Digital literacy:** Low levels of digital literacy among the population hinder effective technology utilization.

### Governance and Regulatory Issues

**Outdated policies:** Existing regulations may not be conducive to technology innovation and adoption.

**Corruption:** Corruption can hinder efficient use of resources and impede technology implementation.

### Cybersecurity Threats

**Vulnerability to cyberattacks:** Weak cybersecurity infrastructure exposes governments to data breaches and system disruptions.

- **Renewable Energy:** Integrating renewable energy sources into the grid more efficiently.
- **Energy Access:** Expanding access to electricity in rural areas through off-grid solutions.

These sectors represent significant opportunities for African countries to harness the power of 4IR to drive economic growth, improve livelihoods, and address social challenges.

**Fostering Collaboration for Enhanced Connectivity in Africa.** To enhance connectivity across African nations, fostering collaboration is paramount. Here are some key steps:

#### 1. Regional Integration and Policy Harmonization

**Economic Communities:** Strengthen existing economic communities like ECOWAS, SADC, and EAC to facilitate cross-border cooperation.

**Harmonized Regulations:** Develop common regulatory frameworks for telecommunications, data protection, and cybersecurity.

**Joint Infrastructure Projects:** Encourage joint investments in regional infrastructure, such as submarine cables and terrestrial networks.

#### Public-Private Partnerships

**Infrastructure Development:** Collaborate on building and maintaining telecommunication infrastructure, including towers, fiber optic cables, and data centers.

**Digital Services:** Partner to develop and deliver innovative digital services like e-health, e-education, and e-government.

**Research and Development:** Jointly invest in research and development to address local challenges and opportunities.

#### **Knowledge Sharing and Capacity Building**

**Skill Development:** Implement joint training programs to build a skilled workforce in the ICT sector.

**Technology Transfer:** Facilitate the transfer of technology and expertise among African countries.

**Best Practice Sharing:** Create platforms for sharing successful digital transformation initiatives.

#### **Digital Infrastructure Sharing**

**Tower Sharing:** Encourage the sharing of telecommunication towers to reduce costs and improve network coverage.

**Spectrum Sharing:** Optimize spectrum usage through efficient sharing mechanisms.

**Data Centre Collaboration:** Establish regional data centres to reduce costs and improve data sovereignty.

#### **Digital Trade and Investment**

**Trade Facilitation:** Remove trade barriers and create a conducive environment for digital commerce.

**Investment Promotion:** Attract foreign and domestic investments in the ICT sector.

**Digital Financial Services:** Develop and promote digital payment systems and financial inclusion.

#### **Cybersecurity Cooperation**

**Joint Threat Assessment:** Collaborate on identifying and addressing cybersecurity threats.

**Incident Response:** Establish regional cyber incident response teams.

**Capacity Building:** Enhance cybersecurity skills and knowledge sharing.

By implementing these steps, African nations can create a more connected, inclusive, and prosperous digital future.

# THE FOUNDATION

I've been in the trade for quite some time and I have done quite a bit within the marketing world. If you were to check on my LinkedIn profile, you'll see that I started my career at a very young age, with British American Tobacco, (BAT,) in Zimbabwe which was and still is one of the top companies in terms of international structure.

Getting into BAT was not easy. The screening process was tough and a competitive process. I think the first round of interviews, held at the Monomotapa Crown Plaza, attracted hundreds of candidates all competing for final 11 graduate trainee vacancies that were available.

In total we went through five rounds of screening before we were onboarded. So, when I got into BAT, it was very clear that I was going into great organization with robust training, international best practices, and a culture for performance. So, I suppose, at that point in time, it also laid the proper foundation for me within marketing sector.

Prior to that, I had done my industrial attachment or internship with Delta. During those days, Delta was operating as different Strategic Business Units. So, there was National Breweries, Chibuku, Ok Zimbabwe, United Bottlers, among others. I was attached at National Breweries, in Manchester Road, Harare.

That's how the foundation of my career in marketing started. Over the years I worked for a few other companies including CFI, Tel.One and the then Barclays Bank of Zimbabwe now First Capital Bank.

In 2019 I was appointed Group Head of Marketing and Communications for FMBcapital Holdings, which is the holding company for First Capital Bank operations. I was tasked with setting the Group Marketing and Communication function. I became the executive responsible for the function covering the five markets where the company has presence namely Botswana, Malawi, Mozambique, Zambia and Zimbabwe. While I had responsibility for these markets my base remained Zimbabwe with period visits to the markets. 2020 Covid hit which meant travel became restricted, so I continued with my responsibilities virtually.

An opportunity came for me to move to Botswana where I took the role of Head of Marketing and Corporate Affairs. It was an opportunity that afforded me the opportunity to fully experience a different market on the ground, in a different country.

Being a Christian that I am, I would attribute all my success to the grace of God, He was kind and was gracious to me to learn different things in the various roles that I have taken. Working in a different country has its unique challenges and learning. Cultural dynamics, markets nuances and economic fundamentals all work together to provide a rich learning experience.

Just one minor example, in other markets company cars are a definite benefit that executives expect when they get appointed into certain roles, whereas this is not so in those markets where Vehicle Asset Finance is available. Hence one's seniority in any organisation is not tied to the type of vehicle that one drives.

For me I can clearly state that I'm a marketer by passion. I'm a marketer by training. And I think I'm a marketer by qualification

I went to school in Gweru starting my primary at Takunda Primary School before moving to Bata Primary School. I then did my O and A level at Thornhill High School. So yes you are right I am a Gweru guy. I then proceeded to National University of Science and Technology for my Bachelors and Masters degrees in Marketing.

My passion for marketing to some extent was influenced by my A level Management of Business teacher, Mr Martin Mashamba, He taught us well and really delivered his subject with excellence. As we were covering the 4 Ps of marketing under the marketing function of the syllabus, I just developed passion for the subject and created that thirst in me to understand the subject further.

God was quite gracious to me because after university, I joined a management trainee program as stated before and I was appointed into my first management role at a young age of 24.

Having worked so much in one specific field, do you see yourself as someone who's flexible to the upcoming technologies, initiatives about marketing? Or you honestly think that they are not that much of a game changer to the whole industry?

Things are changing. Marketing is just like love.

That's how I always define it. People fall in love from the age of 18 to 20 and get married. But people can live until 80 together. Why? As they grow together, they learn to continuously rediscover themselves, learn and adopt to the environment around them.

Similarly in our chosen vocation of marketing, we need to continuously reinvent and renew ourselves on an ongoing basis. What I learnt in college up to the time I graduated in 2000, and what I'm doing, probably I'm using 30% of what I learnt

*Mr Dennis Mambure*

And now we are operating in a digital world with a lot of digital marketing. So, I have not stopped to renew myself. I've done a few courses with a few institutions including the University of Stellenbosch on digital marketing, online marketing, and a few others.

How to make your Marketing Efforts worthwhile, what you need to know At the centre of marketing is one person, who is the client. That's the person who is at the centre of any marketing effort. The client can take different definitions. If he's in a hospital, he's your patient, if he's in a classroom, he's your student, if he's on a bus, he's your passenger.

Depending on the context, what is very important is to understand the customer, the client. But in marketing communications, we call that the audience, you want to resonate with the audience.

So, when you are now dealing with audiences, particularly those that are outside of the country, you want to make sure that you are very clear of your communication. You must do away with biases, you don't take people using your own lens as a Zimbabwean or whatever nationality. Because once you do that, you get it wrong, when onesI communicate to cross-border individuals,

should know that these people operate outside of one's own norms, cultures, traditions, and values. So then there is need to deal and understand that people are diverse.

I have observed in my career that diversity, inclusion, and belonging is very important. And just to enhance that, I enrolled in and completed a Diversity, Inclusion, Equity, and Belonging course with the University of South Florida at some point in time.

I did a course, a certificate course, This increased my awareness of the importance of understanding the various things that we need to be aware of as leaders. When one starts to create marketing interventions at times, the very first thing that one needs to know is to start at a neutral position to say, well, this will not offend some people in some cultures. You need to be very deliberate about it.

That's how I keep myself abreast, understanding the audience, but also just learning around them. Everywhere you stay, there's diversity, if I'm talking to an engineer, already there's diversity because they see probably machines and technical issues. So how do I take care of that diversity? As a marketer one needs to have that quick learning ability, because as marketers we are never taught what the exact products or services that we will be selling or marketings. We are taught principles and strategies how to sell or how to market.

I'm taught how to do things because if work for a beer company, so I must understand the beer product if it's a cigarette company, you now need to understand the difference between nicotine and Tar it's always learning new products.

I'll give you an example of something that I found myself doing. At one point in my career I joined a company called Anchor Yeast now called Lasafre. It provided yeast that is used in bakeries, breweries and in

manufacturing companies. One of the products is fresh yeast which is used in the manufacturing of bread. We used to have problems where the bread makers would complain and say their bread did not come out as it was supposed to because the yeast was of poor quality. In bread making there are other ingredients such as flour, salt among other.

So, what did we do? We had to fully understand the bread making process so I, together with some of my team members enrolled for a free basic bread making course that was offered by National Foods.

From that course we understood better the process and which made us serve our clients better.

# CORPORATE MORALITY

---

# WHAT NOT TO DO

Corporate morality refers to the ethical principles and values that guide the behavior, decision-making, and operations of a corporation. It encompasses the standards by which a company evaluates its actions concerning fairness, honesty, integrity, responsibility, and respect for stakeholders, including employees, customers, suppliers, shareholders, and the broader community.

Corporate morality is about more than just following laws and regulations; it involves making decisions that are ethically sound, even when those decisions might not be legally required. It also includes how a corporation addresses issues like environmental sustainability, social responsibility, and corporate governance.

## Key Aspects of Corporate Morality

- **Ethical Leadership:** Corporate leaders set the tone for the organization's moral climate by promoting ethical behavior and leading by example.
- **Corporate Governance:** Structures and practices ensure accountability, fairness, and transparency in a company's relationship with its stakeholders.
- **Social Responsibility:** A company's commitment to contribute positively to society, including practices that benefit the community, environment, and overall public good.
- **Integrity in Business Practices:** Ensuring honesty and fairness in all business transactions, marketing, and communication.
- **Respect for Stakeholders:** Considering the interests and well-being of all stakeholders, not just shareholders, in decision-making processes.

## Duties of Corporate Morality in Brand and Reputation Building

Building Trust with Stakeholders

- **Transparency:** Being open and

honest about company practices, policies, and performance helps build trust with customers, employees, investors, and the broader community.

- **Accountability:** Accepting responsibility for actions, including admitting mistakes and taking corrective measures, reinforces trust and reliability.

### Promoting Ethical Business Practices

- **Fair Treatment of Employees:** Ensuring fair wages, safe working conditions, and respect for employees' rights contributes to a positive internal and external brand image.

- **Honesty in Marketing and Advertising:** Ethical marketing practices, such as truthful advertising and avoiding misleading claims, enhance brand credibility.

### Commitment to Social Responsibility

- **Community Engagement:** Actively participating in and supporting community initiatives demonstrates the company's commitment to social welfare, boosting brand reputation.

- **Environmental Sustainability:** Implementing eco-friendly practices and reducing the company's environmental impact can attract customers and investors who value sustainability.

### Ensuring Long-Term Integrity

- **Consistency in Ethical Standards:** Maintaining high ethical standards over time ensures that the brand's reputation remains strong and consistent, even during challenging situations.

- **Ethical Leadership:** Leaders who model ethical behavior set a standard for the entire organization, contributing to a culture that values integrity and responsibility.

### Fostering Customer Loyalty

- **Customer-Centric Policies:** Prioritizing customer needs and concerns through ethical practices, such as fair return policies and transparent pricing, helps build long-term loyalty.
- **Protecting Consumer Rights:** Ensuring that products and services are safe, reliable, and meet regulatory standards protects consumers and enhances brand reputation.

## Mitigating Risks

- **Avoiding Scandals and Legal Issues:** Adhering to ethical standards reduces the risk of scandals, legal problems, and reputational damage, which can have long-term negative effects on the brand.

- **Crisis Management:** In the event of a crisis, a company with a strong ethical foundation is better equipped to manage the situation and recover its reputation more quickly.

## Enhancing Brand Identity

- **Aligning with Ethical Values:** A brand that aligns itself with ethical values, such as fairness, respect, and responsibility, can differentiate itself in the marketplace and appeal to consumers who prioritize these values.

- **Corporate Philanthropy:** Engaging in charitable activities and supporting social causes can enhance the brand's identity as a socially responsible and caring entity.

## Strengthening Investor Confidence

- **Sustainable Growth:** Investors are more likely to support companies that prioritize ethical practices, as these companies are seen as less risky and more likely to achieve sustainable growth.

- **Transparency in Financial Reporting:** Honest and accurate financial reporting builds investor confidence and contributes to a strong reputation in the financial community.

Dangers of Not Having Proper Corporate Morality

## Damage to Reputation

- **Loss of Trust:** If a company engages in unethical behavior, it can lose the trust of customers, employees, investors, and other stakeholders. Rebuilding trust after it has been damaged is challenging and often costly.

- **Negative Public Perception:** News of unethical practices can quickly spread, leading to widespread negative publicity. This can tarnish the company's reputation and affect its standing in the market.

## Legal Consequences

- **Lawsuits and Penalties:** Unethical practices, such as fraud, false advertising, or environmental violations, can result in lawsuits, fines, and other legal penalties. These legal battles can be expensive and time-consuming.
- **Regulatory Scrutiny:** Companies that engage in unethical behavior may face increased scrutiny from regulators, leading to more stringent oversight and the potential for additional penalties.

## Financial Losses

- **Loss of Customers and Revenue:** A damaged reputation can lead to a loss of customers, decreased sales, and reduced revenue. Consumers may choose to boycott a company or switch to competitors with better ethical standards.
- **Investor Withdrawal:** Investors may lose confidence in a company that lacks corporate morality, leading to a decline in stock prices and difficulty in securing future investments.

## Employee Morale and Retention Issues

- **Low Employee Morale:** When employees perceive their company as unethical, it can lead to low morale, decreased productivity, and a lack of engagement. This can result in a toxic work environment.
- **High Turnover:** Talented employees are likely to leave a company that does not align with their values. High turnover rates can increase recruitment and training costs and lead to a loss of institutional knowledge.

## Consumer Backlash

- **Boycotts and Protests:** Unethical behavior can lead to consumer boycotts, protests, and social media campaigns against the company. These actions can significantly harm the company's reputation and financial performance.
- **Negative Word of Mouth:** Customers who feel wronged by a company's unethical practices may share

their negative experiences with others, leading to further reputational damage.

## Loss of Competitive Advantage

- **Erosion of Brand Loyalty:** A lack of corporate morality can erode brand loyalty, making it easier for competitors with better ethical practices to attract and retain customers.
- **Difficulty in Attracting Talent:** Companies with poor ethical reputations may struggle to attract top talent, as potential employees often prefer to work for organizations that share their values.

## Increased Operational Risks

- **Supply Chain Disruptions:** Unethical practices, such as exploiting labor in the supply chain, can lead to disruptions, boycotts, and reputational damage if exposed.
- **Lack of Innovation:** A culture that disregards ethics may stifle creativity and innovation, as employees may feel discouraged from speaking up or proposing new ideas.

## Crisis and Scandal

- **Scandals:** Companies that engage in unethical behavior are more likely to experience scandals that can lead to significant long-term damage. Scandals often result in public relations crises that are difficult to recover from.
- **Difficulty in Crisis Management:** In the event of a crisis, a company with poor corporate morality may find it difficult to effectively manage the situation, leading to prolonged damage to its reputation and operations.

## Impact on Stakeholder Relationships

- **Loss of Partnerships:** Business partners, suppliers, and other stakeholders may sever ties with a company that engages in unethical behavior, leading to operational challenges and increased costs.
- **Decreased Community Support:** Companies that fail to act ethically may lose the support of the communities in which they operate, making it

harder to gain approvals for new projects or initiatives.

- **Decreased Community Support:** Companies that fail to act ethically may lose the support of the communities in which they operate, making it harder to gain approvals for new projects or initiatives.

## Long-Term Viability

- **Unsustainable Business Practices:** A focus on short-term gains at the expense of ethical considerations can lead to unsustainable business practices, ultimately threatening the company's long-term viability.
- **Erosion of Corporate Culture:** A lack of corporate morality can erode
